

1. What would you do if a developer says, "**This is not a bug.**"?

Answer: In this scenario, we can sit with the business requirement documents again and reverify them.

2. What would you do if the requirements are unclear or incomplete?

Answer: Rather, writing the test cases on guess, it would be better to contact with the product owner directly and make the requirements proper and clear.

3. How do you decide what to test first when time is limited?

Answer: In this kind of scenario, we have to prioritize the feature with a high risk and high impact first.

4. If a feature works on your machine but fails on the client's machine, how would you investigate the issue?

Answer: Have to check the environment, database from the client machine and also to check the client pulled the update repo.

5. A user reports that they cannot log in, but you cannot reproduce the issue. What steps would you take to investigate and resolve it?

Answer:
